

MINI CRANES SERIES

.....

MADE IN ITALY

// MCR 40

ΕN

ELMA mini crawler cranes offer superb performance in goods movement and transport, while being light and compact enough to operate in small spaces and on uneven surfaces.

They can be used either as stabilised cranes (e.g. the MCR) or for pick & carry (PCR and MCR).

The PCR12 is a crawler vehicle without stabilisers and with a platform load capacity of 1.1T and a crane of 1.2Tm, plus the option of a winch or other features such as a glass installation system.

SERIES

Easy to transport: all models can be transported with a light trailer (3.5T).

Applications: ideal for maintenance and construction operations either indoors or outdoors, such as the movement of building materials or support on the site.

Lightweight structure: the operational weight is moderate, and therefore particularly suitable on delicate surfaces or where there are attics or balconies.

Motorised: the entire range is available with propulsion by endothermic petrol engine for outdoor use, or in a hybrid version with the addition of a single-phase 220 Vac electric motor for use inside and outside buildings.

Alternatively, and in line with rigorous environmental criteria, the range can be fitted with lithium ion batteries and a charging system using network power, enabling their use with no emissions or noise and making this a highly sustainable solution.

The MCR30 is a crawler vehicle with adjustable position stabilisers and 3Tm crane performance rating. Can be fitted with a winch or other features such as a glass installation system.

Can also be used without stabilisers, as a pick & carry crane.

4.0 telematic service for remote diagnostics. These products are fitted with devices for the diagnosis and management of data from the on-board electronic

control panel.

Quiet operation is assured in the petrol version, in compliance with relevant legislation, or in the full-electric version, for the total elimination of noise emissions.
